California Water Commission,

I am writing to ask for you to reject the changes to the Water Storage Investment Program funding rules for the Sites Reservoir Project.

The Sacramento River Basin already faces over-diversion and causes harm to the Bay-Delta through increased algal blooms and higher temperatures. The commission should instead support efforts to restore rivers, advance Tribal and community water justice, improve salmon runs, and climate change.

Changing the rules for the Sites Reservoir Project will only damage California in the future. Please consider the impact of your actions.

Best,
Destiny Santanna
