

## **Release Notes for C2VSim-CG\_R374\_rev**

**(Emin Can Dogrul; DWR)**

This version of C2VSim-CG model has minor revisions compared to the R374 version:

1. Initial moisture contents in subregion 1 at agricultural lands on soil types B and D were greater than the total porosity. These initial conditions were corrected by setting them to total porosity.
2. Both the 1922-2009 and 1973-2009 simulation periods were re-run with the latest IWFM v3.02 numerical engine (IWFM v3.02.193). The differences in the results of R374 and R374\_rev are less than 1%.
3. All Excel files under the folder *Excel* are regenerated based on the results from the R374\_rev model.
4. The installer for the IWFM Excel Add-in which can be used to import Budget files into Excel is now included as part of the C2VSim-CG\_R374\_rev model distribution. It can be found under the folder *Excel\_Addin\_Installer*. This is an older version of the add-in and only works with IWFM v3.02 based models.
