

DAMS WITHIN JURISDICTION OF THE STATE OF CALIFORNIA

DAMS LISTED ALPHABETICALLY BY COUNTY

SEPTEMBER 2024

PHOTO USED WITH PERMISSION FROM THE OWNER

CALIFORNIA DEPARTMENT OF WATER RESOURCES
DIVISION OF SAFETY OF DAMS

Dam Number

Unique identification number used for inventorying dams in California based on the jurisdictional status of a dam. This number is assigned and used by the Division of Safety of Dams (DSOD).

National Inventory of Dams Identification Number (National ID No.)

Unique identification number used for inventorying dams in the U.S. Army Corp of Engineers' National Inventory of Dams (NID) database. DSOD is responsible for assigning this number for dams in California.

Dam Name

The dam name as given by the owner, which may not be unique and may differ from the name of the lake.

Owner Name

The entity or person with legal responsibility for the dam.

Owner Type

Owners are organized into the following categories:

- Associations (Home Owners Associations, etc.)
- City, city agency, or city district
- County, county agency, or county district
- Individual owner/Private citizen (Owner Name not provided)
- Park, sanitation, utility, or water district
- Private company, corporation, LLC, or partnership
- Private trusts and estates
- State Agency
- Water agency or authority

Dam Height

Vertical distance from the downstream toe of the dam to the dam crest (measured in feet).

Crest Length

Distance measured along the dam crest from one abutment to the other (measured in feet).

Reservoir Capacity

Maximum amount of water that the dam can impound (measured in acre-feet).

Dam Type

A four letter code describing and categorizing the principal material, style, or construction method of the dam:

- | | |
|--------------------------------|---------------------------------|
| • CORA Constant Radius Arch | • MULA Multiple Arch |
| • CRIB Crib Wall | • RECT Reinforced Concrete Tank |
| • ERRK Earth and Rock | • ROCK Rock Fill |
| • ERTN Earthen Embankment | • SLBT Slab and Buttress |
| • FLBT Flashboard and Buttress | • VARA Variable Radius Arch |
| • GRAV Gravity | • INFL Inflatable |
| • HYDF Hydraulic Fill | • RCC Roller Compacted Concrete |

Certified Status

The certified status of a dam is one of three statuses:

| Status | Description |
|----------------|---|
| Certified | Jurisdictional sized dams that may safely impound water to the elevation specified on the Certificate of Approval. |
| Certified/Inop | Jurisdictional sized dams without water impounding capabilities under reasonable foreseeable conditions, taking into account the size of the drainage area. |
| Not Certified | Jurisdictional sized dams that operate without a Certificate of Approval. Generally, these dams are in the process of becoming certified, altered to less than jurisdictional size, or being removed. |

Downstream Hazard

The downstream hazard is based solely on potential downstream impacts to life and property should the dam fail when operating with a full reservoir. This hazard is not related to the condition of the dam or its appurtenant structures. The definitions for downstream hazard are borrowed from the Federal Guidelines for Inundation Mapping of Flood Risks Associated with Dam Incidents and Failures (FEMA P-946, July 2013). FEMA categorizes the downstream hazard potential into three categories in increasing severity: Low, Significant, and High. DSOD adds a fourth category of “Extremely High.”

| Downstream Hazard Potential Classifications | Potential Downstream Impacts to Life and Property |
|--|--|
| Low | No probable loss of human life and low economic and environmental losses. Losses are expected to be principally limited to the owner’s property. |
| Significant | No probable loss of human life but can cause economic loss, environmental damage, impacts to critical facilities, or other significant impacts. |
| High | Expected to cause loss of at least one human life. |
| <i>Extremely High</i> | Expected to cause considerable loss of human life or would result in an inundation area with a population of 1,000 or more. |

Condition Assessment

DSOD uses NID’s condition rating definitions (updated 2021) as a guideline in assigning condition assessments.

A dam safety deficiency is defined as a load capacity limit or other issue that can result in a failure of the dam or appurtenant structure. It is a characteristic or condition that does not meet the applicable minimum regulatory criteria.

Normal operations are defined as loading on the dam resulting from day-to-day pool operations to achieve authorized purposes in accordance with minimum state or federal regulatory criteria.

Condition Assessment definitions, as accepted by the National Dam Safety Review Board, are as follows:

| Ratings | Definitions from the National Inventory of Dams |
|----------------|--|
| Satisfactory | <p>No existing or potential dam safety deficiencies are recognized. Acceptable performance is expected under all loading conditions (static, hydrologic, seismic) in accordance with the minimum applicable state or federal regulatory criteria or tolerable risk guidelines.</p> <p>Typical Circumstances:</p> <ul style="list-style-type: none"> • No existing deficiencies or potentially unsafe conditions are recognized, with the exception of minor operational and maintenance items that require attention. • Safe performance is expected under all loading conditions including the design earthquake and design flood. • Permanent risk reduction measures (reservoir restrictions, spillway modifications, operating procedures, etc) have been implemented to eliminate identified deficiencies. |
| Fair | <p>No existing dam safety deficiencies are recognized for normal operating conditions. Rare or extreme hydrologic and/or seismic events may result in a dam safety deficiency. Risk may be in the range to take further action. Note: Rare or extreme event is defined by the regulatory agency based on their minimum applicable state or federal criteria.</p> <p>Other Circumstances:</p> <ul style="list-style-type: none"> • Lack of maintenance requires attention to prevent developing safety concerns. • Maintenance conditions may exist that require remedial action greater than routine work and/or secondary studies or investigations. • Interim or permanent risk reduction measures may be under consideration. |

| | |
|----------------|--|
| Poor | <p>A dam safety deficiency is recognized for normal operating conditions which may realistically occur. Remedial action is necessary. Poor may also be used when uncertainties exist as to critical analysis parameters which identify a potential dam safety deficiency. Investigations and studies are necessary.</p> <p>Other Circumstances:</p> <ul style="list-style-type: none"> • Dam has multiple deficiencies or a significant deficiency that requires remedial work. • Lack of maintenance (erosion, sinkholes, settlement, cracking, unwanted vegetation, animal burrows, inoperable outlet gates) has affected the integrity or the operation of the dam under normal operational conditions and requires remedial action to resolve. • Critical design information is needed to evaluate the potential performance of the dam. For example, a field observation or a review of the dam's performance history has identified a question that can only be answered by review of the design and construction history for the dam. Uncertainty arises when there is no design and/or construction documentation available for review and additional analysis is needed to better understand the risk associated with operation under normal operational conditions. • Interim or permanent risk reduction measures may be under consideration. |
| Unsatisfactory | <p>A dam safety deficiency is recognized that requires immediate or emergency remedial action for problem resolution.</p> <p>Typical Circumstances:</p> <ul style="list-style-type: none"> • A critical component of the dam has deteriorated to unacceptable condition or failed. • A safety inspection indicates major structural distress (excessive uncontrolled seepage, cracks, slides, sinkholes, severe deterioration, etc.), advanced deterioration, or operational deficiencies which could lead to failure of the dam or its appurtenant structures under normal operating conditions. • Reservoir restrictions or other interim risk reduction measures are required. • A partial or complete reservoir drawdown may be mandated by the state or federal regulatory agency. |
| Not Rated | <p>The dam has not been inspected, is not under state jurisdiction, or has been inspected but, for whatever reason, has not been rated.</p> |

Reservoir Restrictions

DSOD may direct or order an owner to operate the reservoir to a specified water surface elevation level that is lower than the maximum storage level. In addition, owners may self-impose a restriction as a result of an owner-initiated study that identifies a dam safety issue. Reservoir restrictions are typically imposed for deficiencies of the dam, spillway, low-level outlet, or other appurtenances with respect to dam safety.

| Dam Number | Dam Name | | Owner Name | Dam Height | Reservoir Capacity | Certified Status | Condition Assessment | County |
|-----------------|----------|-----------|------------|--------------|--------------------|-------------------|------------------------|------------|
