Mr. John Mundy  
Plan Manager  
Ojai Basin Groundwater Management Agency  
417 Bryant Circle, Suite 112  
Ojai, CA 93023

## **RE: Disapproval of the Ojai Valley Basin Alternative**

Dear Mr. Mundy:

The Department of Water Resources (Department) notified the Ojai Basin Groundwater Management Agency (Agency) on July 17, 2019 that Department staff had not recommended approval of the Ojai Valley Basin Alternative (Alternative). The July 17 letter described that the Agency could respond within 30 days to identify where information in the Alternative submittal could be found to address specific deficiencies identified in the Department's Sustainable Groundwater Management Program Alternative Assessment Staff Report, Ojai Valley Basin (Staff Report).

The Department received a letter on August 14, 2019, from the Agency indicating the Agency's intent to move forward in developing a groundwater sustainability plan within the regulatory timelines. As such, the Department is finalizing the decision to not approve the Alternative as described in the attached Statement of Findings document.

The alternatives process represented a point-in-time opportunity for basins to submit either an existing plan that would achieve the objectives of the Sustainable Groundwater Management Act (SGMA) or an analysis of basin conditions demonstrating operation within the sustainable yield for ten years. The Agency selected the latter option for their alternative submittal. The definition of sustainable yield in SGMA presents a high bar – effectively requiring that none of the six undesirable results identified in SGMA were present. Demonstrating that undesirable results were absent for a ten-year period required that basins had determined what those groundwater conditions representing undesirable results (or something functionally equivalent to undesirable results) are, and had been monitoring and managing the basin, as necessary, to ensure the undesirable results were not present or did not occur.

Relatively few basins in the state could successfully claim to have been operating in a functionally-equivalent manner to SGMA for the prior ten years, sufficient to demonstrate operation within the sustainable yield as defined in statute. At the same time, there are many basins in the state taking proactive steps to manage groundwater and surface water. Some of those basins submitted alternatives that were not successful. That outcome is not a penalty or an indictment of water management in

those basins. Rather, it is a finding that those basins did not meet the specific requirements for an alternative and that they must move forward with SGMA compliance in the manner outlined in statute for the medium- and high-priority basins in California.

The Agency is charged with managing groundwater resources in the Ojai Valley Groundwater Basin, and it is clear that steps have been taken to understand and manage those resources. The Agency appears to be well positioned for successful and efficient implementation of SGMA through development of a groundwater sustainability plan.

The Department stands ready to provide assistance to the Agency in development of a GSP. Information on the Department's technical, planning and financial assistance may be found on our website at <https://water.ca.gov/Programs/Groundwater-Management/SGMA-Groundwater-Management>. Please do not hesitate to reach out to me or my staff if you have any questions about the Department's SGMA-related assistance.

Signed:
