

Preview of Breakout Group Brainstorming during Meeting

Goal of Breakout Session: to gather input on what makes small water systems and rural communities vulnerable and at risk to water shortage.

The audience will divide into four groups, and each person can choose which group to join based on their interests and expertise.

- Group 1. Small water systems on groundwater
- Group 2. Small water systems on surface water
- Group 3. Rural households on groundwater
- Group 4. Rural households on surface water

Each group session will brainstorm and report back at the end on these topics:

1. How are some systems/communities more/less exposed to drought impacts and water shortage? (10min)

2. What makes systems/communities more or less susceptible to harm from water shortage? (10min)

3. What makes systems/communities more or less able to cope with or prevent impacts from drought or water shortage? (10min)
