START REDUCING LEAKS NOW!

Free Leak Detection Technical Assistance

The state of California requires water systems to meet a leakage standard of 10% or less. Meeting this requirement is a harder for small water systems and/or tribal systems due to ageing infrastructure, limited budgets, and limited manpower. Locating and repairing leaks:

- Improves operational efficiency
- Lowers operational costs
- Reduces potential contamination
- Extends the life of facilities
- Reduces potential property damage & system liability
- Reduces water outage events

CRWA, in partnership with DWR, is offering FREE leak detection surveys. If you are a small and/or tribal water system & are interested in getting leak detection technical assistance, please contact: Ruby Viramontes at viramontes@calruralwater.org.
